

Decide the first content focus. Then run it for 12 posts.

For Misha + Max | Discussion draft | 4 September 2026

How to use it — 20 minutes. Read the proposal (2 min), debate only the six decisions (12 min), fill the record (4 min), agree the first production session (2 min).

1. Proposed decision

PUBLIC POSITIONING

M2 Lab helps AI-curious SME owner-operators understand what AI can realistically do in their daily work — then turn one repetitive task into a useful workflow, without coding or chasing every new tool.

EDITORIAL LEARNING PROMISE

Understand what matters. Choose one task. Build one useful workflow.

Education through practical application. We explain AI capability, tool choice and limits only through a real work task. The outcome is not “know AI”; it is a first useful workflow.

Not our territory:

- AI news, tool reviews or generic “best tools” lists.
- Income claims, fully automated businesses or “hundreds of agents”.
- A course, agency or proven client-implementation service before evidence exists.
- Content for developers and advanced AI builders.

2. The one reader

Primary reader — an English-speaking or English-working owner-operator of a roughly 2–50-person service SME in Europe. They still oversee marketing, sales, operations or client service; have no AI team; know AI exists; and do not know which repeated task to improve first.

Adjacent reader — a non-technical functional lead in the same type of business who owns a repeatable process and can test one workflow.

JOB-TO-BE-DONE

“Help me understand whether AI is useful for this part of my work, choose a sensible first task, and avoid wasting time or money on the wrong tool.”

Post filter — Would this person recognise their work, learn one concrete thing, and know the first next step?

3. Three content blocks — decide now

These are production formats. They are not the same thing as the themes in section 6. Every Reel belongs to one block.

Block	Job	A post must contain	Target action
M2 Radar	Translate a tool launch, market signal or external example into one work decision.	A named task and reader. It cannot be news or a tool review alone.	Share / reach
M2 Builds	Show a workflow you actually built or tested.	The process, result and what broke, cost more than expected or still needs human review.	Follow / save

Block	Job	A post must contain	Target action
M2 Teardown	Break down a repeated business process before proposing AI.	Where time, money or risk leaks; what AI can take; where a human must remain.	Save / search / share

Discussion rule — keep these three blocks as the only formats for the first cycle. A new idea must fit one of them; do not create a fourth block to avoid choosing.

Current theme mapping: Start with the task / Workflow economics / Safe adoption usually become Teardowns; Build log becomes Builds; Tool -> work change becomes Radar. The exact 12-post split is the next decision.

4. Geography: what we do now

Do not put a country in the public positioning for the first 12–24 posts. The reader is defined by their job and AI maturity, not by a country label.

Organic Instagram recommendation is driven mainly by a viewer's interests, prior interactions and predicted actions. A country becomes useful only when the post genuinely contains a local case, collaborator, market norm, event, price or regulation.

Hypothesis	Role now	Working rule
Netherlands	First research / collaboration hypothesis	Target international or cross-border SMEs, not all local Dutch businesses.
Ireland	First English-first market hypothesis	A clean future test, but not an account identity today.
UK	Distribution and later-test market	Do not adopt it as a default identity; saturation warning is material.
Denmark / Sweden	Later test	English-working and digitally mature; basic AI education may have less whitespace.

Rule: first collect country signals from followers, saves, shares, comments and DMs. Then run a 3–4-post local series for one country.

5. What your own radar says

Evidence	What it means
2,363 Reels / 100 English-language accounts	A strong source of content mechanics and competitor patterns; snapshot dated 1 September 2026.
Shares separated top Reels more than saves	Write for a concrete person who would forward the Reel, not for passive views.
Top concepts focus on cost, failures, risk and one process	Use one task -> one workflow -> one decision. Do not become broad AI news.
Radar audience ≠ M2 Lab audience	The data picks hypotheses, not proven demand. Your own first 12 posts are the real test.

Existing M2 proof you can show now:

- The radar ranked a 654-view Reel above a 25,000-view Reel before you fixed the logic.
- A real collection bill: 623 units / \$12.46, including an avoidable spend.
- Failures: sources closed, video links expired and written rules were not enforced in code.

Use this as build/teardown evidence. It is finite and is not a client case study.

6. First 12-post thematic test

This is a thematic slate, not scripts. Each row is a repeatable series.

Series	Posts	Reader outcome	Example title direction
Start with the task	3	Choose a first AI use case	"Don't start with an AI tool. Start with this 10-minute task map."
Build log: what broke	3	Trust through an honest test	"We gave an agent 2,363 Reels. Here is the decision it got wrong."
Workflow economics	2	Judge cost, time and trade-offs	"Free AI has a price. Here is the bill that arrives in week three."
Safe adoption	2	Know the boundary for data, clients and human review	"Your team turned on AI in Gmail. Here is what it can read."
Tool -> work change	2	Translate a current update into a work decision	"A new voice agent is not a customer-service system. Start with these calls."

Theme rules:

- One Reel = one repeated task, not three tips.
- Every build is genuinely tested by Misha and/or Max and includes a failure, limit or human-review point.
- A tool/news story passes only when it changes a recognisable process.
- No generic tool lists, free lead-scraping or automated-income claims.
- No forced country label without real local substance.

7. Decisions to make now

#	Decision	Proposed answer	Accept / edit / reject
1	Positioning	Use the wording in section 1 for the first 12 posts.	
2	Reader	English-speaking / English-working SME owner-operator in Europe; adjacent functional lead.	
3	Content blocks	Use only M2 Radar / M2 Builds / M2 Teardown. Do not add a fourth format in the first cycle.	
4	Geography	No country in public identity; Netherlands = research hypothesis, Ireland = English-first hypothesis.	
5	Content mix	Use the five themes in section 6; assign each future card to one of the three blocks.	
6	Test discipline	Do not reopen reader, positioning or geography before post 12, except for a factual or ethical problem.	

If you disagree: write the two alternatives in one sentence, choose the lower-cost reversible 12-post test, and name one tie-break owner before production starts.

8. Decision record — complete before leaving

Date: _____ **Present:** Misha / Max

Approved public positioning: _____

Approved core reader: _____

Approved three content blocks / changes: _____

Approved geography rule: _____

Approved five content series / changes: _____

Tie-break owner for this cycle: _____

First production session: _____ Review: after post #12 on _____

PARKING LOT — not part of this decision: permanent country/service market; product/course/agency offer; new industry niche; new language/platform; metric thresholds for the review.
